pomoli e maniglie.knobs and handles

pomoli e maniglie per mobili.knobs and handles for furniture

Confalonieri dal 1950 produce maniglie per mobile e da sempre persegue un approccio al prodotto che pensa innanzitutto all'aspetto funzionale ed ergonomico che possa esprimersi in un buon oggetto di design.

L'obiettivo non è, dunque, la forma fine a se stessa, ma una soluzione di design capace di integrare la funzionalità tipica di un prodotto utile e facilmente utilizzabile.

L'attenzione alle tendenze e all'evoluzione del mobile è alla base del progetto di Confalonieri, per consentire il dialogo tra il mobile stesso e la maniglia: talvolta un'impugnatura caratterizzante, talaltra una variazione della superficie dell'anta o un elemento basico rispettoso di pulizia e linearità; sempre, una soluzione originale per l'apertura del mobile.

Confalonieri has produced furniture handles since 1950, unwaveringly approaching the product with special focus on the functional and ergonomic features that make a quality design item.

Hence, the goal is not form in itself, but a design solution that merges the functional traits typical of a product that is both useful and designed for easy use.

A keen study of trends and evolution of furniture underpins project Confalonieri to create interaction between the item of furniture and the handle which can act, at times, as a characterising grip, and at other times as a variation on the door surface or as a clear-cut linear basic element. Unfailingly an original solution for opening the furniture item.

note

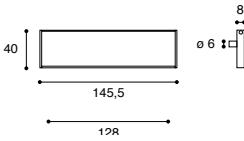

è una maniglia personalizzabile. Pensata per integrarsi con il mobile su cui viene montata, grazie alla possibilità di inserire il medesimo materiale di finitura del mobile: laminato, legno o altro materiale (pelle, materiali plastici...). Nella versione MB09128/1 è fornita con lamierino che può essere verniciato con la stessa laccatura del mobile.

notes
it's a customizable handle.
Designed to be integrated
with the furniture on
which is mounted, thanks
the possibility to enter
the same material of the
cabinet: laminate,
wood or other material
(leather, plastic...).
The version MB09128/1 is
provided with a sheet that
can be painted with the
same coating
of the furniture.

MB09148B

MB09148/A

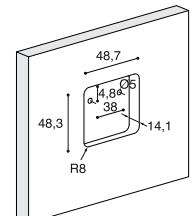

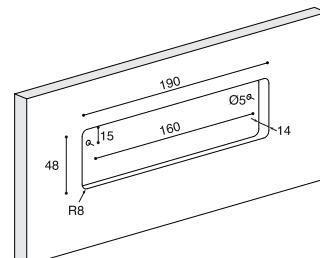

MB09148/B

notes
Nella finitura bianco opaco, è possibile laccare in autonomia la maniglia come l'anta del mobile offrendo così una maggiore integrazione. Poiché la maniglia è costituita da due parti separate (impugnatura e fondello), è possibile creare in autonomia una finitura diversa ("tono su tono" o in contrasto) tra l'impugnatura e il fondello.

notes
In the matt white version the handle can be lacquered by the customer like the door to ensure better integration. Since the handle has two separate sections, grip and base can feature different finish created by the customer.

Fitted handles

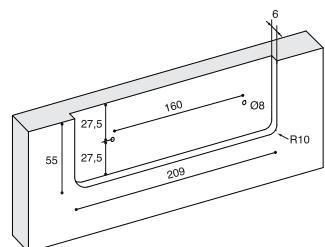

MB09147

147

note
Incasso "a filo" dell'anta
o "in appoggio".
Nella finitura bianco
opaco,
è possibile laccare
in autonomia la maniglia
come l'anta del mobile
offrendo così una
maggiore integrazione.
Poiché il fondo della
maniglia è una parte
separata,
è possibile laccarlo
in autonomia in contrasto
o "tono su tono"
con la finitura del mobile.

notes
"Flush" built into the door
or "affixed".
In the matt white version
the handle can be
lacquered
by the customer like
the door to ensure
better integration.
Since the handle's back
is a separate item,
the customer can lacquer
it in the same-shade
or a contrasting back
compared to the finish
of the furnishing item.

note
Nella finitura bianco opaco, è possibile laccare in autonomia

la maniglia come l'anta del mobile offrendo così una maggiore integrazione.

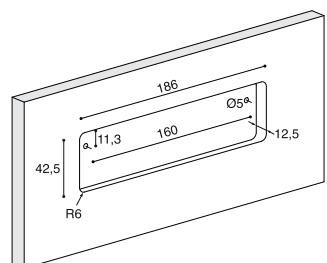

Poiché il fondo della maniglia è aperto è possibile inserire un fondo in contrasto o "tono su tono" con la finitura del mobile.

notes
"Flush" built into the door
In the matt white version,

the handle

can be lacquered by the customer like the door to ensure better integration.

Since the handle is with no back, the back can be finished with the same-shade of the furnishing item or a with contrasting back insert.

TOUCHsystem

171

come appare

Design molto pulito,
con il medesimo
materiale e finitura del mobile.
il sistema di apertura Touch,
è posto sul retro dell'anta
e risulta completamente
nascosto nello spessore
stesso del legno (min 22 mm).

Touch garantisce la perfetta
complanarità della superficie
frontale della maniglia
rispetto all'anta e offre una
copertura posteriore
per mascherare e rendere cieca
la fessura che si forma tra
maniglia e anta stessa.

Con il suo design semplice,
touch è il perfetto connubio
tra funzionalità ed estetica
ricercata. Il primo sistema di
apertura che preserva
la pulizia architettonica
del mobile e che non necessita
di accessori.

this is how it appears

Very clean design,
with the same material
and door finishing.
the Touch opening system
is set on the back of the door
and completely
hidden within the wood
thickness (min. 22 mm).

Touch ensures perfect
alignment
between the handle front
surface and the door.

With its simple design,
touch is the perfect
combination of functionality
and refined aesthetics.
The first opening system
that preserves
the architectural simplicity
of the cabinet
and that does not need
accessories.

172

come funziona

completamente integrata e facile da installare sull'anta, Touch è utilizzabile sia in verticale (con applicazione su armadi) che in orizzontale (su ante e cassettoni); in entrambi i casi, la maniglia può coincidere con la lunghezza dell'anta o del cassetto. quando premuta, Touch dà accesso ad una rientranza ricavata nell'anta stessa; cessata la pressione, ritorna in posizione di riposo grazie ad un sistema meccanico.

vista fronte, chiusa
front view, closed

vista fronte, chiusa
(in trasparenza: la barra e le cerniere del sistema touch)

front view, closed
(in transparency: the bar and the hinges of touch system)

this is how it works

fully integrated and easy to install in the door, Touch can be used both in vertical (with application in cabinets) and horizontal position (on doors and drawers). in both cases, the handle may coincide with the length of the door or drawer. simply with hand pressure, Touch opening system provides access to a recess in the door itself, the pressure ceased, it returned to rest position through a mechanical system.
